

Worldwide introduction of the MD Narrow Fabric Loom for medium-weight ribbons and belts

After a successful introduction phase, we are pleased to be able to offer the MD Narrow Fabric Loom for the global market. The MD replaces the NC, the production and sale of which we discontinued on December 31, 2020.

In addition to high efficiency, the MD offers a wide range of applications for a wide variety of product requirements in the area of medium-weight ribbons and webbings, such as lashing and lifting straps.

We will be happy to make you an offer - please get in touch with your contact person!

Please see further details under: **MD**

New and innovative: model change in the area of Narrow Fabric Looms with Jacquard device

The NFMJ presented at ITMA 2019 replaces all versions of the NFJM / NFJK model series. The NFMJ is based on the previous series, but with a completely revised concept it offers further innovative properties, such as electronically controlled drives for the weft and auxiliary/binder thread feed as well as a fabric take-off and a modern, network-compatible control platform of the latest generation. In addition, the modular concept of the machine offers flexible conversion and expansion options for efficient use with a wide range of applications.

We will be happy to make you an offer - please get in touch with your relevant contact person!

Please see further details under:
NFMJ

High speed circular knitting machine, type 1700/20, for the production of chainette cords

The high-performance machine for all types of chainette cords for use in trimmings and as ear loops for medical protective masks.

The 1700/20 is suitable for the production of all types of chainette cords that are used in a wide variety of areas, such as: trimmings, knitwear, medical applications and much more.

The machine is specially designed for the production of elastic, durable cord qualities with a soft haptic.

Due to the technological properties, these cords can be easily connected to other textile surfaces, making them ideal for use as ear loops for disposable and reusable protective masks.

Features and user benefits

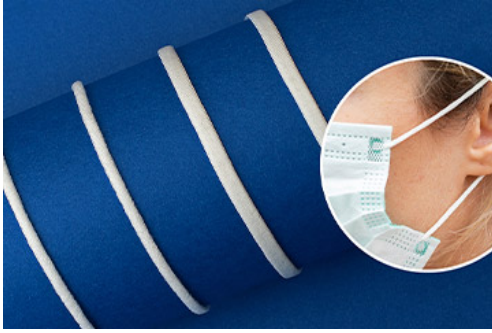

- **Broad scope**
The cylinder diameter and number of needles can be defined individually
- **Interchangeable knitting needles and cylinders**
Cylinders are available with 4, 6, 8, 12, 16 and 24 needles
- **Processing of various types of yarn**
Latch needles for processing natural and synthetic fibre yarns as well as filament yarns
- **Electronically controlled machine stop**
The machine stops automatically in the event of an empty thread spool or a thread break. This is indicated by a red warning lamp.

The machine is equipped with:

- 20 heads (cylinders)
- Single take-down
- Cylinder in 6mm diameter with 12 needles (interchangeable analogous to sample template)
- Electronically controlled speed (inverter)
- Consumables and accessories in the standard scope of

delivery

The 1700/20 can optionally be equipped with a cone creel consisting of 40 positions and a 2-roller take-off device for depositing the finished goods in high boxes.

We would be happy to make you an offer - please refer to your contact person!

Please see further details under:
COMEZ 1700/20

High speed warp knitting machine with double needle bed

The DNB / 600-2B is the ideal machine for volume production of simple articles such as accessories for sportswear as well as for tapes for technical articles.

The machine is equipped with 2 mechanically controlled weft placing bars and can process any type of yarn - whether made from natural fibres or synthetic materials. The design with a double needle bed enables the production of double-layer surface structures.

Due to the high production speed in connection with the coarser mesh structure typical for simple volume articles, the DNB / 600-2B offers a correspondingly high productivity and thus an efficient solution. In addition, its compact design in connection with a reduced working

width enables quick article changes for both small and large jobs.

Features and user benefits:

- high productivity and efficiency
- simple execution
- high user friendliness and easy maintenance

We would be happy to make you an offer - please contact your contact person!

Please see further details under:
COMEZ DNB/600-2B

Here we go again - Save the Date!

Jakob Müller is convinced, that with the measures taken worldwide, the epidemiological situation and thus the economy will take a positive trend in 2021.

We at Jakob Müller are ready when the world and the economy will open up again and look to the future with optimism. The Jakob Müller Group presents its innovations at the following trade fairs:

Febratex | 13. – 16.04.2021 | Blumenau

ITM | 22. – 26.06.2021 | Istanbul

India ITME | 08. – 13.12.2021 | Delhi

Use of natural fibers guarantees sustainability and conservation of resources!

By processing yarns spun from natural fibers in warp and weft, the MBJ8 MDW[®] enables the production of 100% recyclable labels. The additional yarns inserted in the edge area using MDW[®] technology guarantee a very soft, "velvety" touch in the selvedge. They also prevent them from fraying. This process, patented under the brand name Velvedge[®], offers completely new possibilities in the use of textile labels and thus the opening up of new market segments.

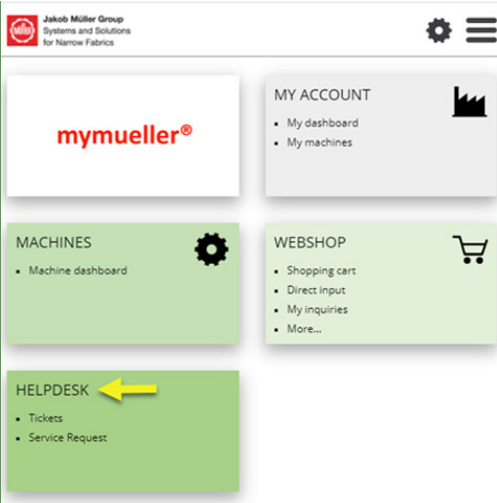

We look forward to your ideas and suggestions on this topic. Do not hesitate and get in touch with your contact person today.

For more information, see: **MÜGRIP[®] MBJ8 MDW[®]**

Use mymueller[®] now for your Helpdesk Inquiries

With the new release of our service-portal mymueller[®] contacting our helpdesk is now made even easier. You can register your service enquiries conveniently via mymueller[®] by simply clicking on the title "Service Request" on the new HELPDESK tile. This will open a form in which you can enter all the relevant facts to your request. Uploading data such as photographs, videos, etc. is also possible. This will ensure that our employees receive all the key information for your request right from the start, preventing unnecessary callbacks and therefore avoiding delays.

In your portal environment, you can always find an overview of your current inquiries as well as the

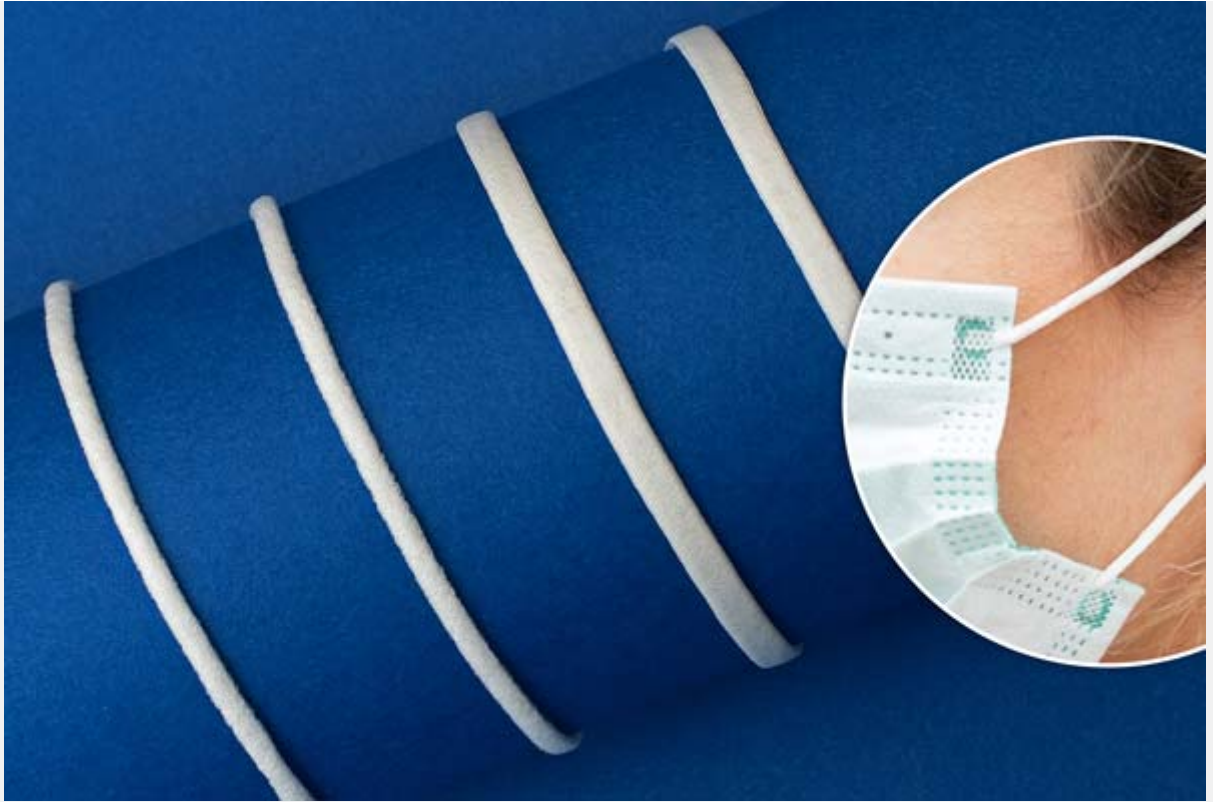

actual status of each one of them by clicking on the title “Tickets” on the HELPDESK tile.

Payment by Credit Card now possible in mymueller®

As a user of mymueller® you are now able to pay for spare parts orders straight away with your credit card. This new function applies to all “orders as offered”, i.e. orders which are confirmed by the customer upon having received an offer from the supplier Jakob Müller AG. As soon as the payment has been confirmed, the ordered parts can be made ready for shipment from our warehouse. This greatly simplifies and speeds up the entire process. Credit card payments are possible for “orders as offered” only.

Elastic ribbons for face masks

FACTORY OUTLET

Profit from our offers!

The factory outlet is always worth a second look, as here one can find machines from our delivery range at very **attractive cut prices**.
